

Company Overview

Our Mission

**Empowering Healthcare Providers
at the Point of Contact**

Comprehensive Healthcare Solutions

CareVoyant's integrated clinical, financial and administrative solutions for **Physicians, Clinics, Home Care** and **Long Term Care** enable providers to more effectively manage their businesses, improve quality of care and optimize reimbursement. Additionally, CareVoyant **Business Intelligence** tools identify trends and exceptions — both clinical and financial — to help healthcare providers improve their performance by making more informed decisions.

Microsoft Platform

CareVoyant is a Microsoft Gold Certified Partner and has been an early adopter of Microsoft platform technologies for over a decade. Over the years we've demonstrated a proven commitment and expertise in delivering software solutions based on the latest Microsoft database, operating system, business intelligence and other technologies.

CareVoyant has consistently gained early access to newest releases and tools needed to ensure comprehensive product development — including product betas, prioritized referrals and advanced technical information.

The Evolution of CareVoyant

Background

Since 1991, CareVoyant (formerly InfoSys, Inc.) has embraced technological change and seized opportunities to develop integrated applications across vertical and horizontal healthcare markets. These efforts have resulted in comprehensive solutions that transform clinical, financial and administrative workflow for a wide range of ambulatory and post-acute healthcare providers.

Ambulatory / Post-acute Continuum

CareVoyant offers healthcare organizations a unique combination of clinical, financial and administrative solutions that meet the requirements of multiple segments of the ambulatory and post-acute continuum. For diverse healthcare organizations — ranging from physicians offices, home care agencies and nursing homes to billing services — CareVoyant satisfies the most demanding clinical documentation, administrative and billing requirements.

Integrated Delivery Networks

CareVoyant enables IDNs to manage enterprise operations (including multiple locations and lines of business) within a single database, thereby eliminating the need to interface multiple applications and maintain various technology platforms.

CareVoyant Value Points

- Comprehensive Solution Suites
- Latest Microsoft Technology
- Clinical / Financial Integration
- Business Intelligence Tools
- Seamless Dynamics Integration
- Open Architecture / Table Driven
- Exception-based Management
- Third-party Integrations

Empowering Physicians,
Home Care, Long-term Care
at the Point of Contact

Solutions Overview

CareVoyant Physician / Clinics is a user-friendly practice management and EMR solution that streamlines office workflow, reduces a physician's documentation time and optimizes E&M coding and claims management.

CareVoyant Home Care is a comprehensive home healthcare solution for Medicare, Medicaid, Private Duty and Hospice services — with integrated scheduling, clinical, billing, point-of-care, OASIS analyzer and dashboard modules.

CareVoyant Long-term Care manages resident census, clinical, billing and administrative functions for nursing homes, assisted living, independent living and CCRCs. Bedside charting features include a touch-screen electronic MAR/TAR and MDS with exception-based ADL tracking.

Comprehensive Ambulatory, Post-acute Solutions

CareVoyant practice management, EMR, home care and long term-care solutions enable healthcare providers to maintain a single patient record with integrated clinical, financial and administrative documentation for multiple admissions and services.

Microsoft Dynamics GP Integration

CareVoyant clinical, financial and administrative modules share the same technology (look and feel) and seamlessly integrate with Dynamics GP Business Solutions.

Exception-based Management

CareVoyant role-based decision support tools prompt users when patient information (including authorizations, schedules, assessments and billing information) is not in compliance with payer regulations, clinical protocols or facility-defined business rules.

Business Intelligence Tools

CareVoyant Analyzers, Dashboard and Managers incorporate Analysis Services technology and seamlessly integrate with Microsoft Excel to identify trends and exceptions and graphically display actionable information to users in a format designed for their specific role in healthcare.

Technology

- Microsoft .NET / SQL Server
- Services Oriented Architecture
- Modular / Table-driven Design
- Analysis / Reporting Services
- Exception-based Management
- Role-based Dashboards
- Single Point Data Entry Across Modules
